Mounting Information:

Rotaries can be mounted & operated in any orientation

Mounting thru bottom flange clearance holes into tapped holes in customer application.

Body mounts with screws and slip fit dowels from bottom. Payload is attached with screw and slip fit dowels.

DIRECTCONNECT Mounting: Gripper is mounted from the under side of Turntable with Button Head screws and slip fit dowels. Turntable is then mounted to rotary with one screw thru the center of the pinion and two slip fit dowel pins.

Mounting thru top flange clearance holes into tapped holes in customer application.

Top mounting from underside of table using tapped holes in body top flange.

Application: Use in applications where precision end stop position and zero backlash are required.

Multiple Mounting Locations: Tapped and thru flange on top and bottom mounting surfaces, DIRECTCONNECT tapped pattern on bottom flange.

Turntable: Has DIRECTCONNECT mounting pattern.

Product Features

Operating Principle

- Air pressure supplied to one port causing the piston/rack to move.
- The rack drives the pinion which is mounted to the output flange and by two sealed ball bearings.
- The turntable has a stop puck mounted on its underside which hits the hard stop screw at end of stroke.
